Secretary  
BHA...  
Chairman

DR. CH. BHADRA REDDY  
General Surgeon

COLONEL...

## DIABETES MELLITUS

Diabetes mellitus (DM) refers to a group of common metabolic disorders that share the phenotype of hyperglycemia.

Several distinct types of DM are caused by a complex interaction of genetics and environmental factors.

Depending on the etiology of the DM, factors contributing to hyperglycemia include reduced insulin secretion, increased glucose utilization, and increased glucose production.

Metabolic dysregulation associated with DM causes secondary pathophysiologic changes in multiple organs, which impose a tremendous burden on the patient with diabetes.
