Summary report on

“HEALTHCARE ASSOCIATED INFECTIONS”

Healthcare associated infections (HAI) are infections acquired in the healthcare set up, and are most commonly cross infections from one patient to another, or from healthcare workers working there. A high frequency of HAI indicates poor infection control measures in the hospital, a poor-quality indicator. They are important cause of increased morbidity and mortality in a healthcare set up. Physicians have a great responsibility in preventing and controlling HAIs in a hospital set up, and thus should be well aware of the infection control measures at every step, in patient care. This course gives an insight to the students on the recognition and prevention activities to be done in a healthcare set up to bring down the incidence of healthcare set up, and thus make the hospital environment a safe place for the patients walking in.
