Summary report on "CLINICAL INFECTIOUS DISEASES" add-on course:

01.11.2023

Infectious diseases are disorders that are caused by organisms, usually microscopic in size, such as bacteria, viruses, fungi, or parasites that are passed, directly or indirectly, from one person to another. Humans can also become infected following exposure to an infected animal that harbours a pathogenic organism that is capable of infecting humans. Infectious diseases are a leading cause of death worldwide, particularly in low-income countries, especially in young children. Emergence of bacterial drug resistance has mounted up to pandemic levels, which has to be combated very quickly. This course would be useful for the young and budding professionals in the field of medicine.
