Summary report on

“ADVANCED CARDIOVASCULAR LIFE SUPPORT”

Advanced Cardiovascular Life Support (ACLS) refers to a set of clinical interventions for the urgent treatment of cardiac arrest, stroke and other cardiovascular life emergencies, as well as knowledge and skills to deploy those interventions. ACLS impacts multiple key links in the chain of survival that include interventions to prevent and treat cardiac arrest and improve outcomes of patients who achieve return of spontaneous circulation after cardiac arrest. American Heart Association (AHA) protocols are considered to be the gold standard protocols for reference.

Resource persons:

Dr N Srinivas Rao, working as Professor in the department of General Medicine at MRMCW served as the principal resource person and was instrumental in preparing the algorithms and case scenarios for the students. He was supported by Dr G J D Rao and Dr Suma Priya for the successful completion of the course.
