Summary report on

“RESEARCH METHODOLOGY”

Research is “Search of knowledge”. It is a scientific and systematic search for relevant information on specific topic according to Oxford Dictionary. Research is a careful inquiry specially through search for new facts in any branch of knowledge. Research comprises defining and redefining problems, formulating hypothesis or suggested solution; collecting, organizing and evaluating data; making deductions and reaching conclusion; and also involves carefully testing the conclusions to determine whether they fit the formulating hypothesis. Research in medical field is very essential to find out what treatments work best, and more specifically what treatments work best for what patient. It can provide important information about how effective a medical intervention is and its possible adverse effects. These interventions include drugs, vaccines, medical devices, and others. Clinical research improves our lives. It leads to significant discoveries, improves health care, and ensures that patients receive the best care possible. It is what makes the development of new medicines and treatments possible.

Resource persons:

Dr C Bala Krishna has been instrumental in conducting courses on research methodology for several batches of students, and highlighted the importance inculcating small steps of research in medical field by every student which could bring in big changes in the field of medicine. He served as the key resource person, and was supported by two others, Dr K V Satyanarayana Murthy, who highlighted on how to frame a research question, and Mr P Palavardhan highlighting the statistical part in research.
